PROFESSIONAL SUMMARY

Cybersecurity graduate student (M.Sc., Digital University Kerala) with hands-on experience in SIEM operations, digital forensics, and malware analysis across two law-enforcement internships. Comfortable across blue-team and offensive contexts, from threat detection and incident response to recon tooling and vulnerability research.

EXPERIENCE

Cybersecurity Intern | Kerala Police Cyber Operations

Jan - Mar 2025

- Operated Wazuh SIEM across active law enforcement infrastructure, tuning detection rules and triaging alerts; reduced mean incident response time by 30%.
- Performed malware analysis and device forensics on 15+ active cybercrime cases, producing evidence reports used in case resolution.
- Collaborated with law enforcement on live cybercrime investigations, gaining exposure to legal evidence standards and chain-of-custody requirements.

Digital Forensics Intern | Cyber Police Station, Thiruvananthapuram

May - Jun 2024

- Performed disk and memory forensics on 20+ cases using Autopsy and Volatility; recovered deleted artifacts and preserved evidence to prosecution standards.
- Authored structured forensic reports documenting findings, tool methodology, and evidence integrity, directly supporting law enforcement proceedings.

PROJECTS

MKR - Modular Knowledge Recon | Python, Nmap, DNS, HTTP, GitHub

2026

- Built a defensive asset validation framework for bug bounty recon and internal assessments: subdomain enumeration (CT logs + DNS), Nmap service discovery, validation of exposed FTP/MySQL/PostgreSQL services, dangling-CNAME takeover detection via SaaS fingerprints, and probes for sensitive paths such as /.env and /.git/.
- Correlates findings into prioritized exposure chains with business-impact statements, reducing noise over raw scanner output.

MaDroid - Android Malware Risk Prediction | Python, scikit-learn, XGBoost, Optuna, Tracee eBPF

2026

- Engineered a 32-feature runtime behavior model from raw Tracee eBPF syscall traces across 50,000+ Android apps (457 GB dataset), predicting a continuous 0-58 malware risk score instead of a binary label.
- Benchmarked 7 regression algorithms and tuned the top performer with Optuna Bayesian search and stacking ensembles; a hand-crafted write_aggression feature outranked all 25 base features.
- Identified a ground-truth relabeling strategy that lifted AUC-ROC by +0.0736 to 0.8229 (0.955 on critical-threat apps); presented the methodology to an academic review panel.

SIEM Security Platform | Wazuh, ELK Stack, Docker

2025

- Deployed a full-stack SIEM on a home lab network with real-time threat detection dashboards; containerized it with Docker, cutting redeployment time by 70%.
- Integrated Linux and Windows log sources across the lab network and built custom Wazuh alert rules for anomalous authentication and service activity.

CERTIFICATIONS

- Certified Penetration Tester - Red Team Hacker Academy (2024)
- IBM Cybersecurity Analyst Professional Certificate - Coursera (2024)

EDUCATION

M.Sc. Cybersecurity | Digital University Kerala

2025 - Aug 2027 (expected)

B.Sc. Cyber Forensics, Data Analytics & Cybersecurity | Yenepoya University, Karnataka

Graduated Oct 2024

TECHNICAL SKILLS

SIEM & Monitoring: Wazuh, ELK Stack, Kibana, log ingestion, alert triage, detection rule tuning

Detection & IR: MITRE ATT&CK-aligned triage, incident response lifecycle, IOC handling

Forensics & Malware: Autopsy, Volatility, Wireshark, Frida, static and dynamic malware analysis

Offensive / Recon: Burp Suite, Metasploit, Nmap, subdomain enumeration, IDOR, broken access control, CNAME takeover

Languages: Python, Bash, C

Platforms: Kali Linux, Parrot OS, Docker, Android (API 33), Linux server administration
